Parking lot USB exercise

Contents	*In Jorge's USB drive, we can see a mix of personal and work files. The Resume of Jorge's is also there as well as a list of relatives names, hence PII information is available. The work files include schedules, resume and new hire letter which can be sensitive. The works file and personal files should always be kept separate.*
Attacker mindset	*Jorge's USB contained the Employees Budget, which can be manipulated. We can see there is a file for the wedding list, where the list of relatives are written, it can be manipulated or deleted. There is a shift schedule, which can give some information regarding the hospital's timings.*
Risk analysis	*Promoting employee awareness about these types of a attacks and what to do when a suspicious USB drive is a managerial control that can reduce the risk of a negative incident. Seeing up routine antivirus scans is an operational control that can be implemented. Another line of defense could be a technical control, like disabling AutoPlay on company PCs that will prevent a computer from automatically executing malicious code when a USB drive is plugged in.*
